

M & M Cattle Sling

The Shank's® M & M Cattle Sling is simple instrument for lifting a down cow by its hips for short periods of time, for the purpose of diagnosis and treatment.

Technical Specifications

- Square tube main beam
- Set of two “jaws” that are adjustable for varying size animals
- Hanging loop for easy attachment to chain or tractor for overhead lifting
- Simple hand crank adjusts both jaws simultaneously
- Includes a set of two (2) pads for animal protection
- Approximate weight 31 lbs. (14 kg)
- Maximum capacity 1,500 lbs. (680 kg)
- Hot dip galvanized coating

Use

To use the Sling, place it over the hip bones and turn the hand crank to tighten the jaws on each side of the animal. Attach the loop of the Sling to the lifting mechanism (tractor, hoist, etc.) to raise the animal.
